

Both sheets below read only kernels/walk's own three CSVs.
The dry red always means the same thing: the inverse locus, $Q = u/m$.

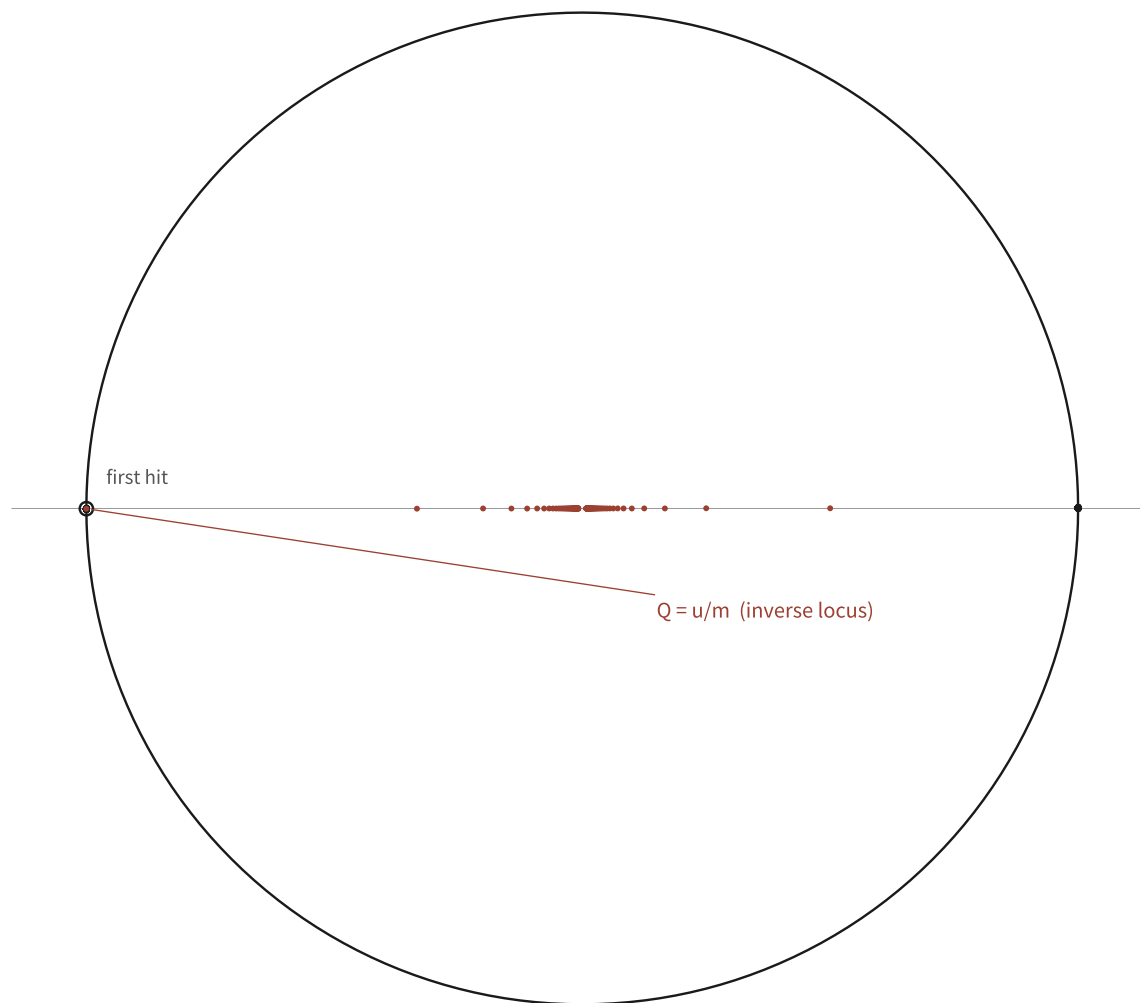

W1 HEADING

the walk on the unit circle
hits marked from crossings.csv

D1 THE PAIR

r , $1/r$, AM, GM, tau vs m
from pairs.csv

this run: $h = 0.002$ steps = 200000 $H0 = 1571$ hits = 127
