

A0

Index

one model · views and details of the same vertices

Shear, bind, stand on the diameter, count.
The model is the walk stood up: $z = \text{count}$.

P1 PLAN

look down z
outer $r = z$
inverse $r = 1/z$

S1 SECTION

cut $y = 0$
every hit lies here
outer $z = |x|$

E1 ELEVATION

face off the cut
 y of the outer point
is $m \cdot hy$

O1 OBLIQUE

the same vertices
un-cut

D1 lock $m = 1$ D2 pair $m = 2$ D3 short hit D4 one LLLLS cycle

D5 four points D6 kite on OP D7 inversion swap W1 heading on the bind

Outer locus in ink. **Inverse locus** in the one accent.

Nothing is drawn that is not a vertex or a cut of this model.

$H0 = 1571$ mean gap $\cdot h = 3.14160630$
gaps 1570 and 1571 102 long, 25 short
wall chord start $\rightarrow 1 = 1.99999996$ $1 \rightarrow 2 = 1.99999996$

P1

Plan

look down the count · spiral of the recorded vertices

D2

Detail · pair

 $m = 2 \cdot (2, 1/2)$ on the home wall

D5

harmonic four of the pair · generator ladder

Detail · four points

D7

Detail · swap

inversion of a collinear diameter · same-wall pair m, m+2

SCH1

the count pays with neighbors

Schedule · two integers

gap word (first hit written as L)

LL
LL

1571×102
 1570×25

$\text{mean gap} \cdot h = 3.14160630$

$H_0 \cdot h = 3.14200000$

$\lambda = \pi / \arctan h = 1570.798421$

Twenty-five copies of LLLLL, then LL.
The five is the convergent 1/5 of the short-gap frequency.
The step budget ended mid-word.

SCH2

chord / first-order path of one half-turn of P

Schedule · two bands

cut is y=0

m

h = 0.002 steps = 200000 H0 = 1571 hits = 127
